PAGE D · NOT LINKED FROM THE PAGE · NOT INDEXED

Setup

The sheet that produces a page. Nothing here is a login and nothing here is protected, because there is nothing behind it to protect — it is a form that writes files. Fill it in, copy the output, paste it into the file, publish.

D1 Page header

Two kinds of page. A **standing page** says what it is under the label *What this is*, and carries no date. A **running series** puts the day's claim under *Today's claim*; its date then appears in four places, all four must agree, and this sheet writes all four from the one field.

KIND OF PAGE

Standing page

DATE (A RUNNING SERIES ONLY)

10/20/2026

SERIES NAME

GYR-O Pages

SUBJECT LINE

A Universal Format for Single-Topic Websit

EYEBROW (SMALL LINE ABOVE THE TITLE)

GYR-O Pages · the format

THE CLAIM. ON A STANDING PAGE: ONE OR TWO SENTENCES SAYING WHAT THIS IS. IN A SERIES: THE ONE SENTENCE THAT CHANGES EACH DAY, SET IN BOLD.

It's a universal page layout and organization scheme for lightweight, single-topic websites.

D2 The picture at the head of the page

Which picture heads the page, and where it sits: beside the title (the masthead picture, the usual place on a standing page) or under the header (a series issue’s front figure). Type the file names that are sitting in the folder, one per line; the chooser lists them and shows what you picked. Captions are set at 22px, larger than body text, because a caption is often the only thing a scanning reader reads.

WHERE IT SITS

Beside the title — the masthead picture

(no picture)
```

D3 The two most recent content changes

The top of column B, the same on every site: *Internal links*, captioned *The two most recent content changes.*, holding two cards, newest first — each a date and what changed, linked to the place on the page where it changed. One card reads as thin; three begins to look like a log. Leave the second set of fields empty on a page that has only ever changed once.

DATE OF THE CHANGE

10/20/2026

WHERE IT POINTS — THE ID OF THE ANSWER OR HEADING THAT CHANGED

e.g. getting-around

WHAT CHANGED, IN A FEW WORDS

e.g. column C now explains the buttons that come and go

ONE LINE MORE

What a returning reader will find there.

DATE OF THE CHANGE BEFORE IT

mm/dd/yyyy

WHERE THAT ONE POINTS

e.g. qa

WHAT CHANGED THEN, IN A FEW WORDS

e.g. every change is now checked twice before it goes up

ONE LINE MORE

What a returning reader will find there.

Copy the links block

```
<h3 class="colbsh" id="colbint">Internal links</h3>
<p class="colbcap">The two most recent content changes.</p>

<h3 class="colbsh" id="colbext">External links</h3>
<p class="colbcap">Every reference to some other website.</p>
```

D4 References

One card per external source. Order is fixed: kind, title, provenance, preview, why it is cited, then the link last. The link goes last on purpose — put it first and readers click it before reading the preview, which defeats the whole column.

1 Primary · source remove

title

provenance — who, when, what license

preview — what you would find if you went there

why it is cited — what it is doing in THIS page

https://… (goes last in the card)

Add a reference Copy the reference blocks

```
<article class="ref" id="r1">
  <span class="rnum">1</span><span class="rkind">Primary · source</span>
  <div class="rtitle"></div>
```

```
  <div class="rmeta"></div>
  <div class="rprev"></div>
  <div class="rwhy"><b>Why it is cited:</b> </div>
  <a class="rlink" href=""></a>
</article>
```

D5 One level up

The last thing on the page, below the footer: a card naming the site one level above this one, with one line saying what that site is, in its own words. It is gyro-sites.online unless this site sits under another instance, as worland-dog-law.online sits under washakie-ai.online. That site is another website, so it also needs a card of its own in D4. Leave the address empty on a site with nothing above it and nothing is written.

ADDRESS OF THE SITE ONE LEVEL UP

https://gyro-sites.online/

ITS NAME, AS SHOWN

gyro-sites.online

WHAT IT IS, IN ITS OWN WORDS

an AI automation tool for generating ultrali

Copy the one-level-up card

```
(nothing above this site: no card)
```

D6 Link health

A browser cannot test somebody else's link — a cross-origin request comes back with no status attached, so an in-page checker reports healthy links as dead. The check therefore runs on a schedule, away from the reader, and writes the small file below. Check anything known dead and give the date it was found.

DATE OF THE LAST CHECK

10/20/2026

Copy links.json

```
{
  "checked": "2026-10-20",
  "dead": {},
  "note": "All sources reachable at the last check."
}
```

> **If in doubt, leave it empty.** A missing or empty `links.json` makes the page say nothing at all about link health. That is the correct default: no file means no claim, and never a false alarm.

D7 Publish

For someone who has used neither GitHub nor GitHub Desktop before. Two words to learn: **Commit** is "save this version with a note." **Push** is "send it to the internet."

1. Save `index.html` in the folder GitHub Desktop made for you.
2. Open **GitHub Desktop**. Your changed files are listed down the left.
3. Type one line in the **Summary** box saying what changed.
4. Click **Commit to main**.
5. Click **Push origin**.
6. Wait about a minute, then load the page with `?v=` and today's date on the end — the host caches for ten minutes and you will otherwise be looking at yesterday.

> **Everything else in that application can be ignored.** Branches, pull requests and merges exist and are irrelevant to a one-person site. You will not need them, this year or next.
