Auto-Gyro

How a GYR-O website gets built, from one sentence to a working address.

> **The main idea: you never have to know what is under the hood.** Domain names, hosting, security certificates, code, publishing: Auto-Gyro handles all of it, the way you drive a car without knowing how the engine works. You say what the site is for and decide what it says; everything technical happens out of sight.

An autogyro: the passing air turns the rotor, and the rotor keeps it up.

What happens

1. **You say what the site is for.**
   One sentence, the first line of everything. If it is not clear yet, you are asked a few plain questions until it is.

2. **The site gets its name.**

A few words of plain English ending in `.online`, that read like what the site is: `worland-dog-laws.online`.

3 **You choose how to hold the name.**
Free, as part of a shared name: `your-farm.gyro-sites.online`, or under your cooperative's name if you belong to one. Or your own: about $11–$28 a year, bought in your own account, and yours outright. The only step that can cost money, so it stays yours.

4 **Auto-Gyro does the rest.**
The pages, the hosting, the address and the padlock in the browser bar are set up for you. No server, nothing to log in to, nothing to update.

5 **Your answers go in.**
Seven plain answers to the questions your readers ask, your sources in the middle, the detail last. An AI drafts them with you; you decide what they say.

6 **It is yours from then on.**
To change a line, edit it and publish. The words, the look and the address all belong to you.

Once a site is up, it is kept the same way every time: one task, one site, one log, shown on the four live GYR-O sites.

SECTION 1

OWNER'S MANUAL · SECTION 1

OPERATION AND FUEL REQUIREMENTS

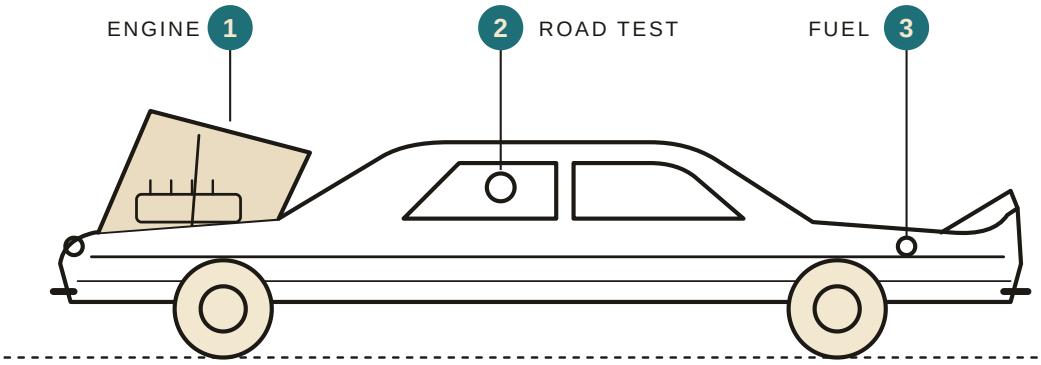

FIG. 1 · YOUR AUTO-GYRO, HOOD RAISED

1 ENGINE COMPARTMENT

No owner-serviceable parts inside. Domain registration, hosting, security certificates, code and publishing are factory-installed and maintained by Auto-Gyro. The owner is not required to open the hood at any time.

2 PRE-DELIVERY INSPECTION AND ROAD TEST

On completion of generation, the vehicle is released to the owner for a road test (“Test Drive”). Operate every control: open each answer, follow each source card, switch Intro and Info on and off, and read the page as a first-time visitor would. Report any condition requiring adjustment; it is corrected before the vehicle is accepted.

3 FUEL

FUEL TYPE	Attention
TANK CAPACITY	One tank per operator per day
REFUELING	Overnight; not available during operation
PRINCIPAL CONSUMERS	Forced detours, expired logins, forgotten passwords, dead links, hunting for the place you left

FIG. 2 · FUEL GAUGE

Low fuel: one tank of attention a day, and every forced detour burns some.

WARNING Operating on an empty tank halts progress for the remainder of the day. Exasperation drains the tank fastest. Auto-Gyro is designed to minimize consumption: the information comes to the reader, sources are previewed before departure, and no trip is taken that a card can answer.

NOTE The fuel tank is an analogy, not a measurement. The research claim that self-control runs down over a day ("ego depletion") failed a large multi-laboratory replication in 2016. What is well established is the cost of each interruption: returning to an interrupted task takes time, and work left unfinished stays on the mind. See interruption-science.online.

Why orange, and why an autogyro

GYR-O stands for its colors: green, yellow and red for the three columns every reader sees, and sometimes orange. Orange is the color of the build. On a finished site it appears once, in the "built by Auto-Gyro" link that brought you here.

An autogyro flies on a rotor that the passing air keeps turning, which is close to how a GYR-O site stays up: no engine room, almost no cost.

The name also tips its hat to W. C. Fields, who drops in by autogyro in the 1933 screwball comedy *International House*.

W. C. Fields arrives by autogyro in International House (Paramount, 1933).

© 2026 Walter Wilkinson, creator of the GYR-O website format *(Green, Yellow, Red, and sometimes Orange)*.
