GYR-O PAGES · THE BUILD

Auto-Gyro

How a GYR-O website gets built, from one sentence to a working address.

An autogyro: the passing air turns the rotor, and the rotor keeps it up.

What happens

1. **You say what the site is for.**
   One sentence, the first line of everything. If it is not clear yet, you are asked a few plain questions until it is.

2. **The site gets its name.**
   A few words of plain English ending in `.online`, that read like what the site is: `worland-dog-laws.online`.

3. **You buy the name.**
   The only step that costs money, so the only step that stays yours: a few dollars, in your own account.

4 **Auto-Gyro does the rest.**
The pages, the hosting, the address and the padlock in the browser bar are set up for you. No server, nothing to log in to, nothing to update.

5 **Your answers go in.**
Seven plain answers to the questions your readers ask, your sources in the middle, the detail last. An AI drafts them with you; you decide what they say.

6 **It is yours from then on.**
To change a line, edit it and publish. The words, the look and the address all belong to you.

Once a site is up, it is kept the same way every time: one task, one site, one log, shown on the four live GYR-O sites.

Why orange, and why an autogyro

GYR-O stands for its colors: green, yellow and red for the three columns every reader sees, and sometimes orange. Orange is the color of the build. On a finished site it appears once, in the “built by Auto-Gyro” link that brought you here.

An autogyro flies on a rotor that the passing air keeps turning, which is close to how a GYR-O site stays up: no engine room, almost no cost. The name also tips its hat to W. C. Fields, who drops in by autogyro in the 1933 screwball comedy *International House*.

W. C. Fields arrives by autogyro in International House (Paramount, 1933).
